

## B. AMENDMENTS TO THE SPECIFICATION

Please amend the following paragraphs as marked:

### **Page 4, lines 3-13, Summary of the Invention**

The present invention provides a method, computer program product, and a data processing system for a method of managing event schedules. A plurality of acceptance messages associated with a first scheduled event having a scheduled event time are received. Each of the plurality of acceptance messages are associated with a respective user. A schedule conflict of a user associated with an acceptance message of the plurality of acceptance messages is identified. Responsive to identifying the schedule conflict, a probable attendance is calculated from the plurality of acceptance messages.

### **Page 18, line 23 – Page 19, line 11**

It is important to note that while the present invention has been described in the context of a fully functioning data processing system, those of ordinary skill in the art will appreciate that the processes of the present invention are capable of being distributed in the form of a computer readable medium of instructions and a variety of forms and that the present invention applies equally regardless of the particular type of signal bearing media actually used to carry out the distribution. Examples of computer readable media include recordable-type media, such as floppy disk, a hard disk drive, a RAM, CD-ROMs, and DVD-ROMs, and transmission-type media, such as digital and analog communication links, wired or wireless communications links using transmission forms, such as, for example, radio frequency and light wave transmissions. The computer readable media may take the form of coded formats that are decoded for actual use in a particular data processing system.
